

CONTENTS IN DETAIL

CHAPTER 1 GENOMES	1		
GENOME COMPOSITION	2		
DNA	2		
Composition Of DNA	3		
DNA STRUCTURE	4		
Primary Structure	4		
Secondary Structure	5		
Tertiary Structure	9		
SUPERHELICITY	10		
Superhelicity Generated By Nucleosome Assembly	11		
Superhelicity Generated By DNA Gyrases	11		
Superhelicity Generated By Transcription	12		
Superhelicity Generated By Replication	12		
NONCANONICAL DNA STRUCTURES	13		
Z-DNA	13		
Cruciform DNA	13		
Triplex DNA	15		
Quadruplex DNA	17		
Slipped-Strand DNA	19		
GENOME CHARACTERISTICS	19		
Chromosome Shape, Number, And Distribution	19		
DNA Length	20		
C-Value Paradox	20		
Genetic Complexity Paradox	22		
SUMMARY	23		
Additional Reading	25		
Literature Cited	25		
CHAPTER 2 THREE DOMAINS OF LIFE	27		
IN THE BEGINNING ...	27		
Prebiotic Era	28		
Cellular Life	30		
Phylogenetics	30		
CHARACTERISTICS OF THE THREE DOMAINS	33		
Bacteria	34		
Archaea	34		
Eukaryotes	35		
VIRUSES: UBIQUITOUS PARASITES	37		
SUMMARY	37		
Additional Reading	37		
CHAPTER 3 REPLICATION FORKS	39		
DNA REPLICATION	39		
Semi-Conservative DNA Replication	40		
DNA Replication And Natural Selection	42		
		DNA Replication Forks	43
		The Replication-Fork Paradox	43
		SEQUENCE OF EVENTS AT REPLICATION FORKS	46
		DNA Unwinding And Leading-Strand Synthesis	47
		DNA Relaxation	49
		Lagging-Strand Synthesis	50
		Conservation Of Replication-Fork Events	53
		ORGANIZATION OF REPLICATION FORKS	54
		Replication-Fork Configuration	54
		Replication-Fork Factories	56
		REPLICATION-FORK VELOCITY	58
		NUCLEOTIDE POOLS	59
		SUMMARY	61
		Additional Reading	62
		Literature Cited	62
		CHAPTER 4 REPLICATION PROTEINS: LEADING-STRAND SYNTHESIS	63
		DNA HELICASES	63
		The DnaB Family Of Helicases	65
		The MCM Family Of Helicases	66
		Rotary Engine Activity Of DNA Helicases	67
		How Helicases Unwind DNA	68
		SINGLE-STRAND-SPECIFIC DNA-BINDING PROTEINS	70
		DNA POLYMERASES	73
		The DNA Polymerase I Paradigm	74
		DNA Polymerase Families	76
		DNA Polymerase Fidelity And Molecular Evolution	83
		SLIDING CLAMPS	84
		Bacteria	84
		Archaea And Eukarya	85
		DNA TOPOISOMERASES	85
		Type IA Enzymes	86
		Type IB Enzymes	87
		Type II Enzymes	88
		SUMMARY	90
		Additional Reading	91
		Literature Cited	92
		CHAPTER 5 REPLICATION PROTEINS: LAGGING-STRAND SYNTHESIS	93
		RNA-PRIMED NASCENT DNA	93
		DNA PRIMASE	96

INITIATION OF OKAZAKI-FRAGMENT SYNTHESIS	98	EUKARYOTIC CHROMATIN AND DNA REPLICATION	147
THE HELICASE-PRIMASE PARADOX	99	Replication Origins	147
Bacteria	100	Replication Forks	148
Archaea And Eukarya	100	SISTER CHROMATID COHESION	154
HAND-OFF FROM PRIMASE TO POLYMERASE	101	Formation Of A Cohesin Ring Around Sister Chromatids	155
Bacteria	101	Establishment Of Cohesion Between Sister Chromatids	157
Eukarya	102	Dissolution Of Cohesion Between Sister Chromatids	158
HAND-OFF FROM INITIATOR POLYMERASE TO REPLICATOR POLYMERASE	102	DUPLICATION OF EPIGENETIC INFORMATION	159
SLIDING CLAMP LOADERS	103	Nucleosome Segregation and Positioning	159
Bacteria	103	Protein Modification	161
Archaea And Eukarya	104	DNA Methylation	163
PRIMER EXCISION	105	SUMMARY	166
Bacteria	105	Additional Reading	167
Eukarya	106	Literature Cited	167
DNA LIGATION	107	CHAPTER 8 REPLICONS	169
THE RINGMASTER	109	THE REPLICON MODEL	169
DYNAMIC PROCESSIVITY	111	The Classical Replicon Model	169
SUMMARY	114	The Replicon Model Today	170
Additional Reading	115	Visualizing Replicons	171
CHAPTER 6 TERMINATION	117	Why Replicons?	174
REPLICATION-FORK TERMINATION	117	REPLICON TAXONOMY	175
When Forks Collide	117	DNA Structure And Replicator Location	175
Topological Problems Unique To Replication-Fork Termination	118	Modes Of DNA Replication	176
REPLICATION-FORK BARRIERS	120	Modes Of DNA Synthesis	176
Replication-Fork Barriers In Bacteria	120	SIX MANIFESTATIONS OF THE REPLICON	178
Replication-Fork Barriers In Eukarya	124	A. dsDNA With Internal Replicators That Use Replication Forks	178
OTHER IMPEDIMENTS TO REPLICATION FORKS	126	B. dsDNA With Internal Replicators That Use Single-Strand Displacement	179
THE ROLE OF REPLICATION-FORK BARRIERS IN NATURE	127	C. dsDNA With Internal Replicators That Use The Rolling Circle	181
THE TERMINATION PARADOX	127	D. dsDNA With Terminal Replicators That Use Single-Strand Displacement And Then Gap-Filling	182
Protein-Nucleotide Primers	128	E. ssDNA With Internal Replicators That Use Gap-Filling And Then Single-Strand Displacement	183
Circularization	128	F. ssDNA With Terminal Replicators That Use Gap-Filling And Then Single-Strand Displacement	185
Concatemer Formation	128	SUMMARY	188
Telomeres And Telomerase	128	Additional Reading	189
SUMMARY	133	Literature Cited	189
Additional Reading	134	CHAPTER 9 REPLICATION ORIGINS	191
CHAPTER 7 CHROMATIN ASSEMBLY, COHESION, AND MODIFICATION	135	PATTERNS OF INITIATION	192
CHROMATIN	136	FINDING REPLICATION ORIGINS	193
Bacteria	136	Replicator Activity	193
Archaea	140	Origins Of Bidirectional Replication	194
Eukarya	142	Nascent-Strand Abundance	194

DNA Sequence Duplication	194	BACTERIAL GENOMES	269
Leading-Strand Sequence Bias	195	preRC Assembly On Bacterial Genomes	270
CHARACTERISTICS OF REPLICATION ORIGINS	195	preIC Assembly On Bacterial Genomes	272
Origin Anatomy	195	ARCHAEAL GENOMES	273
Origin Specificity	197	EUKARYAL GENOMES	275
Origin Function	197	preRC Assembly (Origin Licensing) On Eukaryotic Genomes	275
Origin Density	202	preIC Assembly On Eukaryotic Genomes	281
Origin Usage	204	SUMMARY	285
Origin Timing	205	Additional Reading	286
DEVELOPMENTAL ACQUISITION OF SITE-SPECIFICITY	206	Literature Cited	286
PARADOXES AND SOLUTIONS	207	CHAPTER 12 CELL CYCLES	287
The Replicator Paradox	207	THE BACTERIAL CELL CYCLE	287
The Site-Selection Paradox	213	The Initiator/Replicator Ratio Triggers Genome Duplication	289
The MCM Paradox	215	Suppression of Reinitiation Within A Single Cell Cycle	290
SUMMARY	218	THE ARCHAEAL CELL CYCLE	293
Additional Reading	221	THE EUKARYOTIC MITOTIC CELL CYCLE	293
Literature Cited	222	Common Features	293
CHAPTER 10 ORIGIN PARADIGMS	223	Abbreviated Mitotic Cell Cycles	295
DNA-NICKING MECHANISM	223	Cell-Cycle Analysis	295
PROTEIN-PRIMING MECHANISM	224	Accelerators And Brakes	298
DNA TRANSCRIPTION MECHANISM	227	Yin And Yang	301
Bacteriophage T7	227	GENOME DUPLICATION PRECEDES CELL DIVISION	302
Bacteriophage T4	229	Driving the $G_2 \rightarrow M$ Transition	303
Bacterial Plasmid ColE1	229	Regulating preRC Assembly	304
Mitochondrial DNA	230	Driving The $M \rightarrow G_1$ Transition	305
DNA HELICASE MECHANISM	232	Driving The $G_1 \rightarrow S$ Transition	307
Simian Virus 40	232	PREVENTING DNA RE-REPLICATION	309
Polyomavirus	234	Single-Cell Eukarya	310
Papillomavirus	234	Multicellular Eukarya	311
Herpes Simplex Virus	234	PARALLEL PATHWAYS	315
DNA HELICASE LOADER MECHANISM	235	FUNCTIONAL REDUNDANCY	316
Bacteria	236	DEVELOPMENTALLY PROGRAMMED POLYPLOIDY	316
Archaea	240	Initiating Endocycles	318
Single-Cell Eukarya	242	Sustaining Endocycles	321
Multicellular Eukarya	246	Two APCs, Two Cell Cycles	322
WHY DNA HELICASE LOADERS?	254	SUMMARY	322
AMPLIFICATION ORIGINS	255	Additional Reading	324
<i>Sciara coprophila</i>	255	CHAPTER 13 CHECKPOINTS	325
<i>Drosophila melanogaster</i>	255	RESTRICTION CHECKPOINT	328
<i>Tetrahymena thermophila</i>	258	Bacteria	328
SUMMARY	259	Archaea	330
CHAPTER 11 INITIATION	261	Eukarya	330
THE ROAD TO REPLICATION FORKS	262		
Replication-Fork Assembly And Cell Proliferation	264		
Where The Road Splits	266		
VIRAL GENOMES	267		

DNA DAMAGE RESPONSE	335	PHARMACOLOGICAL AGENTS THAT TARGET DNA REPLICATION	391
The SOS Response In Bacteria	337	Antiviral Pharmaceuticals	391
Restarting Replication Forks In Bacteria	340	Antibiotic Pharmaceuticals	396
Archaea	346	Anti-Cancer Pharmaceuticals	397
Eukarya	346	SUMMARY	406
G ₁ DNA Damage Checkpoint	349	Additional Reading	408
DNA-Replication Checkpoint	350	Literature Cited	408
G ₂ DNA Damage Checkpoint	353		
THE EUKARYOTIC REPLISOME REVISITED	354	CHAPTER 15 EVOLUTION OF CELLULAR REPLICATION MACHINES	409
Stabilization Of Replication Forks	355	REPLICATION MACHINES IN BACTERIA, ARCHAEA, AND EUKARYA	409
Mediators	357	MAKING THE JUMP FROM RNA TO DNA GENOMES	411
Replication-Fork Restart In Eukarya	357	A ROLE OF VIRUSES IN THE EVOLUTION OF DNA GENOMES?	412
G₂ CHECKPOINT	358	DID DNA EVOLVE IN VIRUSES AS A WAY TO EVADE HOST DEFENSES?	412
Bacteria	359	REPLICON TAKEOVER	414
Eukarya	359	THE ACQUISITION OF MULTIPLE REPLICATION ORIGINS	415
SPINDLE-ASSEMBLY CHECKPOINT	360	VIRUSES AS A FOSSIL RECORD	416
Mitotic Cells	360	SUMMARY	416
Meiotic Cells	362	Additional Reading	417
SUMMARY	364	GLOSSARY	418
Additional Reading	366	INDEX	425
Literature Cited	366		
CHAPTER 14 HUMAN DISEASE	367		
INFECTIOUS DISEASES	368		
Viruses	368		
Bacteria	373		
Archaea	373		
NONINFECTIOUS DISEASES	374		
The Road To Cancer	374		
DNA Replication Proteins As Cancer Biomarkers	380		
HERITABLE DISEASES	382		
The 'Seven Deadly Sins' Of DNA Replication	382		
The Road To Nucleotide-Repeat Disorders	384		
Mutations In DNA Replication Genes	389
